## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 3, 2003 has been entered.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over the German reference (29611382) in view of the French reference (2762815).

The German reference teaches a luggage box (1) having securing elements or locks (10,12) on the bottom that engage securing elements (9) on receiving tracks (5) that are recessed within the floor of the cargo space (6) of a vehicle. See especially figure 1. There is an actuation means (lock handle) outside of the luggage box. The tracks (5) are not elongated and do not extend continuously substantially the entire

Art Unit: 3727

length of the cargo space. However, the tracks are located in various locations along the entire length of the cargo space.

The French reference teaches continuous elongated tracks (26) with multiple locations (40c) to lock a seat in various different locations. It would have been obvious to one of ordinary skill in the art at the time of the invention to make the variously spaced tracks on either side of the cargo space of the German reference into elongated and extend continuously along the entire length of the cargo space on either side of the cargo space as a continuous track is easier to install than a series of multiple tracks while still allowing the luggage box of the German reference to be stored in various different positions.

With respect to claim 5, the German reference teaches that the securing elements (10,12) are rotated via a transfer mechanism (11, 13) attached to the rotating lock handle. See especially the embodiment of figures 4-5.

### ***Response to Arguments***

4. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
